

Enhance your clean energy assets with AI-powered monitoring & controls

enSights AI-powered monitoring and controls platform maximizes financial and energy yields, while reducing costs.

- Boost productivity by 30%
- More than 60% reduction in workforce
- Enhance visibility and accessibility

We have all the basic features that you’ve come to love and expect from a monitoring and controls platform, such as live monitoring, analysis, and alerts, plus the more advanced features that you’ve been craving

Financial module

Manage all your financial processes: tariffs, plans and billing. Know precisely when and how much to charge your clients.

Big data & AI based insights

Identify abnormalities in real-time with insights on how to mitigate them.

Advanced and automated reporting

Create your own branded reports at a click of a button. Schedule and share with clients or executives easily.

Custom dashboard with KPI

Design and control your entire portfolio with interactive 3D visualizations and accurate financial projections. Track your KPIs, SLAs and performance guarantees.

Remote vendor connects

Plug and Play - Connect to any renewable energy asset or hardware.

3rd Party Integrations

Integration with all leading CRM, ERP and financial systems

Renewable energy shouldn't just survive. It should THRIVE!

The enSights platform is not only hardware agnostic, but it completely eliminates the need for any SCADA or DAS hardware. That means reduced upfront costs for new assets and simple migration for previously-installed assets.

Leaving that legacy tech behind has never been easier! Migrating to the enSights platform is so easy that we’ve onboarded 500 assets in only 3 days and 10 years of data in a week!

Using enSights interactive platform to get a birds eye view and also drill down into individual hardware, you can easily track and enhance the energy and financial performance of your diversified and distributed renewable energy portfolio, including solar, storage, and EV chargers.

Our Track Record

9,900 assets managed

1.5 GWp installed capacity

1,0045 TWh of generation
