

NakedPak, The cookable packaging

Cookable?

NakedPak is edible food packaging that dissolves in boiling water, made from nutrient-rich macro red algae.

Tell me more!

It's transparent, sealable, and printable with edible ink. It integrates seamlessly into existing packaging machines with plug-and-play compatibility.

Is it safe?

Absolutely, NakedPak is safe to consume. Its layered structure shields it from dirt and pollutants, and it can be rinsed with water—just like fruits and vegetables.

Is it wrapped in plastic?

No need for plastic! NakedPak is durable in humid and wet environments, stands independently on shelves, and doesn't require primary packaging.

And the price?

NakedPak competes within the traditional material cost range and avoids extra fees or fines associated with packaging regulations.
