

DriftSense® is an optimal pesticide application timing prediction software, that provides growers with the ability to know precisely and in a personalized way when is the best time to apply on each field, for a maximum efficiency.

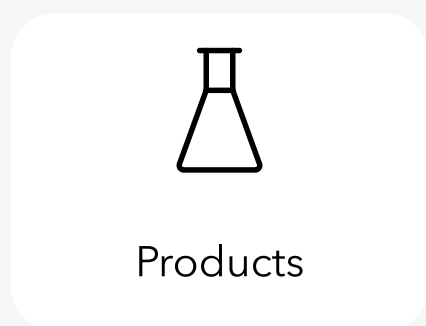

It is the first optimal application timing prediction tool based on multiple types of data, not only climatic.

Having an optimal application timing plan for each field changes the rules of the game, improving the efficiency and profitability of applications, while significantly reducing the environmental impact.

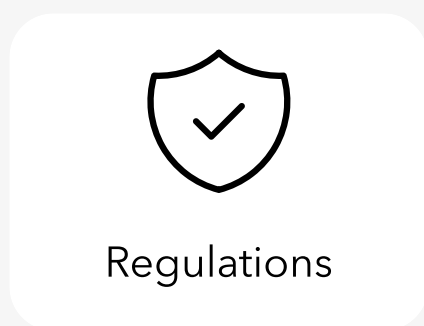

It converts many specific variables that influence application into an accurate and customized prediction. Allows you to plan optimal application days and times, 7-10 days in advance.
