

What Is EndFills?

EndFills is a clean-tech startup revolutionizing waste sorting using smart sensor fusion to end landfills and create a cleaner planet

The Problem

Unsorted waste processing suffers from inefficient sorting and low throughput - billions lost in wasted materials and massive environmental damage

The Solution

Transform raw mixed waste into high-purity, recycle-ready materials through fully automated and efficient separation

How It Works?

Our smart sensor fusion solution combines thermal and RGB images to instantly classify and recover recyclables directly from raw unsorted waste

Why It Matters?

Circular economy starts here! The global crisis calls for efficient solutions that cut landfills and incinerators while unlocking the immense financial value of untapped resources
